

# FACTS SHEET

## 2512A

DUAL LINK PCMCIA DMX INTERFACE CARD

Working with laptop computers has many advantages. The disadvantage is, that laptops do not accept low-cost desktop computer plug-in cards. Serial PCMCIA interface cards support RS-485, but are not suitable for DMX512, as they do not match the required data parameters.

The SOUNDLIGHT 2512A Dual Link PCMCIA DMX card changes the facts. This unit has been specifically designed to drive DMX devices, and matches the speed requirements for two independent DMX links. Up to 1024 DMX channels in this tiny box - incredible but true. What's more, there are also two DMX inputs, giving configurations of 1024 slots input, 1024 slots output, or 512 slots in and 512 slots out. Imagine what you could do with this powerful unit.

The 2512A PCMCIA interface card comes complete with a set of drivers, demo software and instructions how to use the DLL commands within your programming environment.

Programmers find a wealth of support files on the internet. Check our unique support site for BASIC, PASCAL or C examples, and download program source code for WINDOWS 9x, Windows Millennium or Windows 2000. We do not charge any royalties, every support given is FREE. We always welcome your input. By supporting one of the fastest DMX interfaces available today, your software only wins...

The 2512A PCMCIA DMX card is the perfect choice for the travelling lighting technician. Minimum size, minimum weight, maximum performance. From SOUNDLIGHT, the DMX Company.

INTERFACE SIZE:	standard PCMCIA format - 1 slot
COMPATIBILITY:	Standard PCMCIA slot Type I, II
